

# Locking Barrel Connector

## Fact Sheet

Locking Barrel Connectors have an innovative twist and lock design allowing for more efficient wire connecting. No stripping of wires required; simply insert the wires and twist 90°, locking the wires into place.

### DESCRIPTION:

- Waterproof construction
- Will not deteriorate from exposure to water, oxidation, rust, chemicals
- Connects to wire without removal of any wire jacket or insulation
- Works with multiple wire gauges from 10 to 14
- Provides a tightly locked connection, impervious to fill replacement

### INSTALLATION:

1. To assist with strain relief, twist wires together approximately 8" from the connector
  2. DO NOT strip jacket from wire
  3. Connector is gauge specific; Verify wire gauge matches connector gauge
  4. Insert wires into holes fully so they are visible in the clear cap
  5. Twist connector closed until locked
- Do not use with THHN/THWN or any stranded wire product.
  - Do not pull on wires after connection is made.
