

Rhino UV Armor Signs

Fact Sheet

Part# S101-

Consider signs as billboards for your brand. They show the community your commitment to damage prevention and safety in the places they work and live. Such an important message deserves to be told by vibrant, full-color signs backed by a 10-year warranty. At Rhino we feel you shouldn't have to spend a fortune for colorful and effective signs. In the past signs were boring, full-color printing was expensive, and digital printing was unreliable.

We've filed to patent a revolutionary digital printing process that can produce the highest quality signs at unbelievable prices. We have refined digital printing for outdoor use, and our unique process can produce UV resistant, unlimited color signs at no additional cost. Need a custom shape or multiple holes for installation? We've got you covered with zero fees because we've eliminated the need for special tooling or die cutting with a state-of-the-art CNC cutter. You dream it up, we will make it!

Description:

- Full-color printing on durable, aluminum composite material (ACM). ACM is twice as rigid as solid aluminum but weighs 50% less.
- Digitally printed graphics protected with UV stable coating
- Temperature Stable from -50° to +150°F
- Standard hazardous materials signs use 1" high by 1/4" stroke lettering to meet DOT spec 195.410.
- Maximum size per-print: Approx. 96" x 48" per-panel
- 10-Year Warranty
